## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 15-17 objected to because of the following informalities the claim 15 is apparatus claim and dependent claims 16-17 are method claims. Appropriate correction is required.

### ***Allowable Subject Matter***

1. Claims 15-24 and 34-37 allowed.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-14 and 25-33 are rejected under 35 U.S.C. 103(a) as being obvious over Van Lieshout (U.S. Patent # 6,084,789) in combinations with Carpenter, Jr. (U.S. Patent # (U.S. Patent #4,679,114) and Montague (U.S. Patent # 4,156,838).

Art Unit: 2838

Van Lieshout disclose the claimed subject matters a method of controlling the voltage levels between a first and second node of integrated circuit (figure 1-5), including a first capacitor (figure 4 and 5, Item C1), a second capacitor (figure 4-5, item C2) connected in series, a control means (column 2, line 1-30). However Van Lieshout does not disclose the utilization of technique for a voltage level setting and the capacitor do not exceed the breakdown voltage limitation. Carpenter Jr. teaches the utilization of the similar technique for a voltage level setting (column 3, line 50-61 and column 4, line 1-50) and Montague teaches the utilization of the similar technique for (column 4, line 10-50). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Van Lieshout's capacitive up/down converter by utilizing the technique taught by Carpenter, Jr. and Montague for the purpose of providing improved protection circuit.
